Warning!_____

This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, it may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

Electric Shock Hazard – Do not operate the machine with its back cover removed. There are dangerous high voltages inside.

Disclaimer

This information in this document is subject to change without notice. In no event shall Apex Technology Inc. be liable for damages of any kind, whether incidental or consequential, arising from either the use or misuse of information in this document or in any related materials.

Packing List

Accessories (as ticked) included in this package are:
<input type="checkbox"/> AC power cable
<input type="checkbox"/> Driver & manual CD disc
<input type="checkbox"/> Other. _____ (please specify)

Safety Precautions

Follow the messages below to prevent your systems from damage:

- ◆ Avoid your system from static electricity on all occasions.
- ◆ Prevent electric shock. Don't touch any components of this card when the card is power-on. Always disconnect power when the system is not in use.
- ◆ Disconnect power when you change any hardware devices. For instance, when you connect a jumper or install any cards, a surge of power may damage the electronic components or the whole system.

Table of Contents

1.1 Specifications

Specs	APC-3215	APC-3515	APC-3715	APC-3915
CPU	Socket 478 Intel® Core™ Duo, up to 2.33GHz			
Cache	2MB			
Chipset	Mobile Intel® 945GM Express + ICH7M			
Processor Side Bus Freq.	533MHz/667MHz FSB			
System Memory	DDR2 667/533 SDRAM DIMM x2 (w/o ECC function), Max. 4GB			
Display Size	12.1" 800x600 TFT LCD	15" 1024x768 TFT LCD	17" 1280x1024 TFT LCD	19" 1280x1024 TFT LCD
Maximum Colors	262K	16.2M	16.2M	16.2M
Viewing Angle (Degree)	55(left), 55(right), 35(up), 50(down)	60(left), 60(right), 40(up), 60(down)	70(left), 70(right), 63(up), 67(down)	80(left), 80(right), 75(up), 85(down)
Luminance (cd/m ²)	300	350	300	420
Backlight Lifetime	50,000 Hours			
Rating	NEMA 4/IP65 certified Front Bezel			
Touch Screen Type	8-Wire Resistive (optional)			
Serial Port	1 x COM Port			
USB Port	4 x USB2.0 Port			
Serial ATA Parts	ICH7M Built-in SATA controller, supports 2 ports			
1394 Port	TI TSB43LV22(dual port)			
Storage	1 x 2.5" HDD or 1 x CF by TB-405 (Optional), 1 x Slim CD-ROM/DVD Combo			
Keyboard & Mouse	1 x PS/2 Keyboard and Mouse Connectors			
Digital I/O	4 in/4 out (optional)			
BIOS	Award 4Mbit BIOS, support ACPI Function			
Watchdog Timer	256 levels			
LAN	1 x 10/100 BaseT LAN, 1 x PCI Express Gigabit LAN			
VGA	1 x external VGA, 945GM built-in			
Expansion Slot	2 x PCI Expansion Slot			
IDE Interface	ICH7M built-in one channel Ultra DMA 33/66/100,CF			
Audio	ICH7M Built-in Audio controller + AC97 Codec ALC655 w/ 6 channels (Line-out, Line-in, Mic.)			
Power Supply	220W/ 0.8U ATX/AC			
Construction and Color	Steel Chassis and Beige			
Dimensions (WxHxD)	390 x 265 x 111	410 x 310 x 111	457 x 355 x 123	484 x 400 x 139.5

Operating Temperature	0~60°C (32°F~140°F)
Storage Temperature	-20°C ~ 80°C (-68°F~176°F)
Relative Humidity	10%~90% (non-condensing)
Vibration	5~17Hz, 0.1" double amplitude displacement 17~640Hz, 1.5G acceleration peak to peak
Shock	10G acceleration peak to peak (11 millimeters)

1.3 Installation of CD-ROM & HDD

Both of 2 at the right side

There are 8 screws to deal with when enclosing or removing the chassis.

Shown in the picture are the four screws (as circled in red) that tighten or loosen the bracket where the CD-ROM is placed underneath. On top of the bracket is where the HDD is placed. To remove the CD-ROM, the HDD has to be removed first.

Now slide the HDD into the bracket as shown in the picture. After that, connect the HDD to the 44-pin black IDE by means of the cable, making sure the red stripe of the cable is connected to the pin 1 of the connector of the HDD

The red circles shown in the picture are the screws that put the CD-ROM in place. The arrows shown are where the HDD, which is just placed on top of the CD-ROM, is tightened.

1.4 Installation of PCI Addon

Shown in the picture are the two PCI expansion slots as circled. They can be inserted with any addon for expanded functions.

Now slide the addon into the PCI slot, making sure the golden part faces the slot. When both parts that are interfaced together come into the right contact, slightly push the addon into the rail of the slot. This shows the addon is already completely connected.

After sliding the addon into the PCI expansion slot, get the two screws as circled tightened to finish the connection.

Both of 2 at the right side

To finish the job, just fasten the 8 screws as shown in the picture.

1.5 Brief Description of the APC-3215/3515/3715/3915

The APC-3215/3515/3715/3915 is a rugged, compact and panel-mount industrial PC, which comes with a 12-inch (luminance of 300 cd/m²)/15-inch (luminance of 350 cd/m²)/17-inch (luminance of 300 cd/m²)/19-inch (luminance of 420 cd/m²) TFT LCD. It is powered by an Intel® Core™ Duo, up to 2.33GHz processor. The industrial panel PC also features two PCI expansion slots, one COM port, four USB 2.0 ports, one 2.5" HDD, one slim CD-ROM/DVD Combo, Universal AC power of 100~240V, etc. It is ideal for use as a PC-based controller for Automotive, Logistic Process, Materials Handling, and Kiosk applications.

Figure 1.5: Front View of APC-3215/3515/3715/3915

Figure 1.6: Rear View of APC-3215/3515/3715/3915

1.6 Panel Mounting of the APC-3215/3515/3715/3915

The APC-3215/3515/3715/3915 panel PC is designed to be panel-mounted as shown in Figure 1.6. Just carefully place the unit through the hole and tighten the given 8 screws from the rear to secure the mounting.

Figure 1.6: Panel mounting of the APC-3215/3515/3715/3915

2.1 Mainboard

Figure 2.1: Mainboard Overview

2.2 Installations

This section provides information on how to use the jumpers and connectors on the mainboard in order to set up a workable system.

2.2.1 Installing the CPU

The mainboard supports a Socket 478MT (Napa) processor socket for Intel® Core™ 2 Duo , Intel® Core™ Duo and Intel® Core™ Solo mobile processors.

The processor socket comes with a screw to secure the processor. As shown in the left picture below, loosen the screw first before inserting the processor. Place the processor into the socket by making sure the notch on the corner of the CPU corresponds with the notch on the inside of the socket. Once the processor has slide into the socket, fasten the screw. Refer to the figures below.

Figure 2.2: Installation of CPU

Note:

Ensure that the CPU heat sink and the CPU top surface are in total contact to avoid CPU overheating problem that would cause your system to hang or be unstable.

2.2.2 Installing the Memory

The mainboard supports two DDR2 memory socket for a maximum total memory of 4GB in DDR2 memory type.

Installing and Removing Memory Modules

To install the DDR2 modules, locate the memory slot on the board and perform the following steps:

1. Hold the DDR2 module so that the key of the DDR2 module align with those on the memory slot.
2. Gently push the DDR2 module in an upright position until the clips of the slot close to hold the DDR2 module in place when the DDR2 module touches the bottom of the slot.
3. To remove the DDR2 module, press the clips with both hands.

Figure 2.3: Installation of Memory Module

2.2.3 Installing the Jumpers

Jumpers are used on MB899 to select various settings and features according to your needs and applications. Contact your supplier if you have doubts about the best configuration for your needs. The following lists the connectors on MB899 and their respective functions.

Jumper Locations on Mainboard

JP2: CPU FSB Selection (reserved)

JP5: LCD Panel Power Selection

JP6: 1394 EPROM Write Selection

JP7: Clear CMOS Setting

JP8: Compact Flash Slave/Master Selection

JP2: CPU FSB Selection(reserved)

JP2	CPU FSB
 1 2 3	533MHz
 1 2 3	667MHz

JP5: LCD Panel Power Selection

JP3	LCD Panel Power
 1 2 3	3.3V
 1 2 3	5V

JP6: 1394 EPROM Write Selection

JP6	1394 EPROM
 Short	For EPROM Write
 Open	Normal

JP7: Clear CMOS Setting

JP4	Setting
 1 2 3	Normal
 1 2 3	Clear CMOS

JP8: CompactFlash Slave/Master Selection

JP8	CF Setting
 Short	Master
 Open	Slave

2.2.4 Connectors on the Mainboard

The connectors on mainboard allows you to connect external devices such as keyboard, floppy disk drives, hard disk drives, printers, etc. The following table lists the connectors on MB899 and their respective functions.

CN1: PS/2 Keyboard and PS/2 Mouse Connectors
CN2, CN3: COM1 and VGA Connector
CN4: 10/100 RJ-45 and USB1/2 Ports
CN5: 1394 Connector
J12: SPDIF Out Connector
CN6,CN7: GbE RJ-45 and USB3/4 Ports
CN8: Audio Connector
CN9, CN10: Serial ATA Connectors
FAN1: System Fan Power Connector
FAN2: CPU Fan Power Connector
IDE1: IDE Connector
FDD1: Floppy Drive Connector
J14: ATX Power Supply Connector
J1: IrDA Connector
J2: Digital I/O
J3: System Function Connector
J4: TV-OUT (S-VIDEO & Composite) Connector
J5: TV-OUT (Y,Pr,Pb) Connector
J6: USB5/6 Port Pin Header
J7: COM2 Serial Port
J8: Wake On LAN Connector
J9, J10: LVDS Connectors (1st channel, 2nd channel)
J11: LCD Backlight Connector
J13: Mini PCI Connector
U36: Mini PCI- E(x1) Connector
J15: Speaker Connector
J16: 1394 Connector
J17: Front Audio Connector
J18: PCI-E(x1) Slot
J19: CD-In Pin Header
J20: Compact Flash Connector
PCI1: PCI Slot (supports 2 Master)
CON1: SDVO Port Connector
Headers and Connectors on MB899 Daughter Cards

Figure 2.5: Location of Connectors

CN1: PS/2 Keyboard and PS/2 Mouse Connectors

PS/2 Mouse

PS/2 Keyboard

Signal Name	Keyboard	Mouse	Signal Name
Keyboard data	1	1	Mouse data
N.C.	2	2	N.C.
GND	3	3	GND
5V	4	4	5V
Keyboard clock	5	5	Mouse clock
N.C.	6	6	N.C.

CN2, CN3: COM1 and VGA Connector

Signal Name	Pin #	Pin #	Signal Name
DCD	1	6	DSR
RXD	2	7	RTS
TXD	3	8	CTS
DTR	4	9	RI
GND	5	10	Not Used

Signal Name	Pin #	Pin #	Signal Name
Red	1	2	Green
Blue	3	4	N.C.
GND	5	6	GND
GND	7	8	GND
N.C.	9	10	GND
N.C.	11	12	N.C.
HSYNC	13	14	VSYNC
NC	15		

CN4: 10/100 RJ-45 and USB1/2 Ports

CN5: 1394 Connector

J12: SPDIF Out Connector

CN6: GbE RJ-45 and USB3/4 Ports

CN8: Audio Connector

The audio connector, from top to bottom, is composed of Line in, Line out and Microphone jacks.

CN9, CN10: Serial ATA Connectors

FAN1: System Fan Power Connector

FAN1 is a 3-pin header for system fans. The fan must be a 12V (500mA).

Pin #	Signal Name
1	Ground
2	+12V
3	Rotation detection

FAN2: CPU Fan Power Connector

FAN2 is a 3-pin header for the CPU fan. The fan must be a 12V fan.

Pin #	Signal Name
1	Ground
2	+12V
3	Rotation detection

IDE1: IDE Connector

Signal Name	Pin #	Pin #	Signal Name
Reset IDE	1	2	Ground
Host data 7	3	4	Host data 8
Host data 6	5	6	Host data 9
Host data 5	7	8	Host data 10
Host data 4	9	10	Host data 11
Host data 3	11	12	Host data 12
Host data 2	13	14	Host data 13
Host data 1	15	16	Host data 14
Host data 0	17	18	Host data 15
Ground	19	20	Protect pin
DRQ0	21	22	Ground
Host IOW	23	24	Ground
Host IOR	25	26	Ground
IOCHRDY	27	28	Host ALE
DACK0	29	30	Ground
IRQ14	31	32	No connect
Address 1	33	34	No connect
Address 0	35	36	Address 2
Chip select 0	37	38	Chip select 1
Activity	39	40	Ground

FDD1: Floppy Drive Connector

FDD1 is a slim 26-pin connector and will support up to 2.88MB FDD.

Signal Name	Pin #	Pin #	Signal Name
VCC	1	2	INDEX
VCC	3	4	DRV_SEL
VCC	5	6	DSK_CH
NC	7	8	NC
NC	9	10	MOTOR
DINST	11	12	DIR
NC	13	14	STEP
GND	15	16	WDATA
GND	17	18	WGATE
GND	19	20	TRACK
NC	21	22	WPROT
GND	23	24	RDATA
GND	25	26	SIDE

J14: ATX Power Supply Connector

Signal Name	Pin #	Pin #	Signal Name
3.3V	11	1	3.3V
-12V	12	2	3.3V
Ground	13	3	Ground
PS-ON	14	4	+5V
Ground	15	5	Ground
Ground	16	6	+5V
Ground	17	7	Ground
-5V	18	8	Power good
+5V	19	9	5VSB
+5V	20	10	+12V

J1: IrDA Connector

Pin #	Signal Name
1	+5V
2	No connect
3	Ir RX
4	Ground
5	Ir TX

J2: Digital I/O

Signal Name	Pin	Pin	Signal Name
GND	1	2	VCC
OUT3	3	4	OUT1
OUT2	5	6	OUT0
IN3	7	8	IN1
IN2	9	10	IN0

J3: System Function Connector

J3 provides connectors for system indicators that provide light indication of the computer activities and switches to change the computer status. J3 is a 20-pin header that provides interfaces for the following functions.

Speaker: Pins 1 - 4

This connector provides an interface to a speaker for audio tone generation. An 8-ohm speaker is recommended.

Pin #	Signal Name
1	Speaker out
2	No connect
3	Ground
4	+5V

Power LED: Pins 11 - 15

Pin #	Signal Name
11	Power LED
12	No connect
13	Ground
14	No connect
15	Ground

ATX Power ON Switch: Pins 7 and 17

This 2-pin connector is an “ATX Power Supply On/Off Switch” on the system that connects to the power switch on the case. When pressed, the power switch will force the system to power on. When pressed again, it will force the system to power off.

Reset Switch: Pins 9 and 19

The reset switch allows the user to reset the system without turning the main power switch off and then on again.

Orientation is not required when making a connection to this header.

Hard Disk Drive LED Connector: Pins 10 and 20

This connector connects to the hard drive activity LED on control panel. This LED will flash when the HDD is being accessed.

Pin #	Signal Name
10	HDD Active
20	5V

J4: TV-OUT (S-VIDEO & Composite) Connector

J5: TV-OUT (Y,Pr,Pb) Connector

The pin assignments of the TV out connector are as follows:

Signal Name	Pin	Pin	Signal Name
NC	1	2	NC
SL/Y	3	4	Ground
SC/Pr	5	6	Ground
CVBS/Pb	7	8	Ground

CVBS : Composite signal

Pb : Component Chrominance (Pb) analog signal

SL : S-Video Luminance analog signal

Y : Component Luminance (Y) analog signal

SC : S-Video Chrominance analog signal

Pr : Component Chrominance (Pr) analog signal

J6: USB5/6 Port Pin Header

Signal Name	Pin	Pin	Signal Name
Vcc	1	5	Ground
D-	2	6	D+
D+	3	7	D-
Ground	4	8	Vcc

J7: COM2 Serial Port

COM2

Signal Name	Pin #	Pin #	Signal Name
DCD, Data carrier detect	1	6	DSR, Data set ready
RXD, Receive data	2	7	RTS, Request to send
TXD, Transmit data	3	8	CTS, Clear to send
DTR, Data terminal ready	4	9	RI, Ring indicator
GND, ground	5	10	Not Used

J8: Wake On LAN Connector

J8 is a 3-pin header for the Wake On LAN function. Wake On LAN will function properly only with an ATX power supply with 5VSB that has 200mA.

Pin #	Signal Name
1	+5VSB
2	Ground
3	-PME

J9, J10: LVDS Connectors (1st channel, 2nd channel)

The LVDS connectors on board consist of the first channel (J9) and second channel (J10) and supports 18-bit or 36-bit.

Signal Name	Pin #	Pin #	Signal Name
TX0-	2	1	TX0+
Ground	4	3	Ground
TX1-	6	5	TX1+
5V/3.3V	8	7	Ground
NA	10	9	NA
TX2-	12	11	TX2+
Ground	14	13	Ground
TXC-	16	15	TXC+
5V/3.3V	18	17	ENABKL
+12V	20	19	+12V

J11: LCD Backlight Connector

Pin #	Signal Name
1	+12V
2	Backlight Enable
3	Ground

J13: Mini PCI Connector

U36: Mini PCI- E(x1) Connector (bottom side)

J15: Speaker Connector

The J15 connector supports 2W/8ohm stereo audio power amplifier.

Pin #	Signal Name
1	Audio L
2	Ground
3	Ground
4	Audio R

J16: 1394 Connector

Signal Name	Pin	Pin	Signal Name

NC	18	17	NC
DDC SC	20	19	DDC SD

Remarks: When using dual DVI, the first DVI video output is through J1. After setting the drivers in Windows, then the second DVI output (via J2) will function. ID391D and ID391 are different since the latter (ID391) has video output via J2. The pin assignments of J1 and J2 are the same.

3.1 BIOS Setup

This chapter describes the different settings available in the Award BIOS that comes with the board. The topics covered in this chapter are as follows:

- BIOS Introduction
- BIOS Setup
- Standard CMOS Setup
- Advanced BIOS Features

BIOS Introduction

The Award BIOS (Basic Input/Output System) installed in your computer system's ROM supports Intel processors. The BIOS provides critical low-level support for standards devices, such as disk drives, serial ports and parallel ports. It also adds virus and password protection as well as special support for fine-tuning the chipset controlling the entire system.

BIOS Setup

The Award BIOS provides a Setup utility program for specifying the system configurations and settings. The BIOS ROM of the system stores the Setup utility. When you on the computer, the Award BIOS is immediately activated. Pressing the **** key immediately allows you to enter the Setup utility. If you are a little bit late to press the **** key, **POST** (Power On Self Test) will continue with its test routines, thus preventing you from invoking the Setup. If you still wish to enter Setup, restart the system by the pressing the "Reset" button or simultaneously pressing the **<Ctrl>**, **<Alt>** and **** keys. You can also restart by turning the system off and back on again. The following message will appear on the

screen:

Press to Enter Setup

In general, you press the arrow keys to highlight items, <Enter> to select, the <PgUp> and <PgDn> keys to change entries, <F1> for help and <Esc> to quit.

When you enter the Setup utility, the Main Menu screen will appear on the screen. The Main Menu allows you to select from various Setup functions and exit choices.

Phoenix - AwardBIOS CMOS Setup Utility	
Standard CMOS Features	Frequency/Voltage Control
Advanced BIOS Features	Load Fail-Safe Defaults
Advanced Chipset Features	Load Optimized Defaults
Integrated Peripherals	Set Supervisor Password
Power Management Setup	Set User Password
PnP/PCI Configurations	Save & Exit Setup
PC Health Status	Exit Without Saving
ESC : Quit	↑ ↓ → ← : Select Item
F10 : Save & Exit Setup	
Time, Date, Hard Disk Type...	

The section below the Setup items of the Main Menu displays the control keys for this menu. At the bottom of the Main Menu just below the control key section there is another section displaying information on the currently-highlighted item in the list.

Note: *If the system cannot boot after making and saving system changes with Setup, the Award BIOS supports an override to the CMOS settings that reset your system to its default.*

Warning: *It is strongly recommended that you avoid making any changes to the chipset defaults. These defaults have been carefully chosen by both Award and your system manufacturer to provide the absolute maximum performance and reliability. Changing the defaults could cause the system to become unstable and crash in some cases.*

Standard CMOS Setup

“Standard CMOS Setup” choice allows you to record some basic hardware configurations in your computer system and set the system clock and error handling. If the motherboard is already installed in a working system, you will not need to select this option. You will need to run the Standard CMOS option; however, if you change your system hardware configurations, the onboard battery fails, or the configuration stored in the CMOS memory was lost or damaged.

Phoenix - AwardBIOS CMOS Setup Utility Standard CMOS Features

Date (mm:dd:yy)	Wed, Apr 28, 2004	Item Help
Time (hh:mm:ss)	00 : 00 : 00	Menu Level >
IDE Primary Master	None	Change the day, month, Year and century
IDE Primary Slave	None	
IDE Secondary Master	None	
IDE Secondary Slave	None	
Drive A	1.44M, 3.5 in.	
Drive B	None	
Video	EGA/VGA	
Halt On	All Errors	
Base Memory	640K	
Extended Memory	129024K	
Total Memory	130048K	

At the bottom of the menu are the control keys for use on this menu. If you need any help in each item field, you can press the <F1> key. It will display the relevant information to help you. The memory display at the lower right-hand side of the menu is read-only. It will adjust automatically according to the memory changed. The following describes each item of this menu:

Date

The date format is:

Day: Sun to Sat
Month: 1 to 12
Date: 1 to 31
Year: 1999 to 2099

To set the date, highlight the “Date” field and use the PageUp/PageDown or +/- keys to set the current

time.

Time

The time format is:

Hour:	00 to 23
Minute:	00 to 59
Second:	00 to 59

To set the time, highlight the “Time” field and use the <PgUp>/<PgDn> or +/- keys to set the current time.

IDE Primary HDDs/IDE Secondary HDDs

The onboard PCI IDE connectors provide Primary and Secondary channels for connecting up to four IDE hard disks or other IDE devices. Each channel can support up to two hard disks; the first is the “Master” while the second, the “Slave”.

Press <Enter> to configure the hard disk. The selections include Auto, Manual, and None. Select “Manual” to define the drive information manually. You will be asked to enter the following items:

CYLS:	Number of cylinders
HEAD:	Number of read/write heads
PRECOMP:	Write precompensation
LANDING ZONE:	Landing zone
SECTOR:	Number of sectors

The Access Mode selections are as follows:

CHS	(HD<528MB)
LBA	(HD>528MB and supports Logical Block Addressing)
Large	(for MS-DOS only)
Auto	

Remarks: The mainboard supports two serial ATA ports and are represented in this setting as IDE channel 0.

Drive A /Drive B

These fields identify the types of floppy disk drive A or drive B that has been installed in the computer. The available specifications are:

360KB	1.2MB	720KB	1.44MB	2.88MB
5.25 in	5.25 in	3.5 in	3.5 in	3.5 in

Video

This field selects the type of video display card installed in your system. You can choose the following video display cards:

EGA/VGA	for EGA, VGA, SEGA, SVGA Or PGA monitor adapters (default)
CGA 40	Power up in 40 column mode
CGA 80	Power up in 80 column mode
MONO	for Hercules or MDA adapters

Halt On

This field determines whether or not the system will halt if an error is detected during power up.

No errors	The system boot will not be halted for any error that may be detected.
All erros	Whenever the BIOS detects a non-fatal error, the system will stop and you will be prompted.
All, but Keyboard	The system boot will not be halted for a keyboard Error; it will stop for all other errors.
All, but Diskette	The system boot will not be halted for a disk error; it will stop for all other errors.
All, but Disk/Key	The system boot will not be halted for a keyboard or disk error; it will stip for all others.

Advanced BIOS Features

This section allows you to configure and improve your system and allows you to set up some system features according to your preference.

Phoenix - AwardBIOS CMOS Setup Utility		
Advanced BIOS Features		
CPU Feature	Press Enter	ITEM HELP
Hard Disk Boot Priority	Press Enter	
Virus Warning	Disabled	Menu Level >
CPU L1 and L2 Cache	Enabled	
Quick Power On Self Test	Enabled	
First Boot Device	Floppy	
Second Boot Device	Hard Disk	
Third Boot Device	CDROM	
Boot Other Device	Enabled	
Swap Floppy Drive	Disabled	
Boot Up Floppy Seek	Disabled	
Boot Up NumLock Status	On	
Gate A20 Option	Fast	
Typematic Rate Setting	Disabled	
Typematic Rate (Chars/Sec)	8	
Typematic Delay (Msec)	250	
Security Option	Setup	
APIC Mode	Enabled	
MPS Version Control for OS	1.4	
OS Select For DRAM>64MB	Non-OS2	
Report No FDD For WIN 95	Yes	
Small Logo (EPA) Show	Enabled	

CPU Feature

Press Enter to configure the settings relevant to CPU Feature. Hard Disk Boot Priority

With the field, there is the option to choose, aside from the hard disks connected, “Bootable add-in Cards” which refers to other external devices.

Virus Warning

If this option is enabled, an alarm message will be displayed when trying to write on the boot sector or on the partition table on the disk, which is typical of the virus.

CPU L1 and L2 Cache

Cache memory is additional memory that is faster than conventional DRAM (system memory). CPUs from 486-type on up contain internal cache memory, and most, but not all, modern PCs have additional (external) cache memory. When the CPU requests data, the system transfers the requested data from the main DRAM into cache memory, for even faster access by the CPU. These allow you to enable (speed up memory access) or disable the cache function.

Quick Power On Self Test

When enabled, this field speeds up the Power On Self Test (POST) after the system is turned on. If it is set to Enabled, BIOS will skip some items.

First/Second/Third Boot Device

These fields determine the drive that the system searches first for an operating system. The options available include Floppy, LS120, Hard Disk, CDROM, ZIP100, USB-Floppy, USB-ZIP, USB-CDROM, LAN and Disable.

Boot Other Device

These fields allow the system to search for an OS from other devices other than the ones selected in the First/Second/Third Boot Device.

Swap Floppy Drive

This item allows you to determine whether or not to enable Swap Floppy Drive. When enabled, the BIOS swaps floppy drive assignments so that Drive A becomes Drive B, and Drive B becomes Drive A. By default, this field is set to Disabled.

Boot Up Floppy Seek

This feature controls whether the BIOS checks for a floppy drive while booting up. If it cannot detect one (either due to improper configuration or its absence), it will flash an error message.

Boot Up NumLock Status

This allows you to activate the NumLock function after you power up the system.

Gate A20 Option

This field allows you to select how Gate A20 is worked. Gate A20 is a device used to address memory above 1 MB.

Typematic Rate Setting

When disabled, continually holding down a key on your keyboard will generate only one instance. When enabled, you can set the two typematic controls listed next. By default, this field is set to Disabled.

Typematic Rate (Chars/Sec)

When the typematic rate is enabled, the system registers repeated keystrokes speeds. Settings are from 6 to 30 characters per second.

Typematic Delay (Msec)

When the typematic rate is enabled, this item allows you to set the time interval for displaying the first and second characters. By default, this item is set to 250msec.

Security Option

This field allows you to limit access to the System and Setup. The default value is Setup. When you select System, the system prompts for the User Password every time you boot up. When you select Setup, the system always boots up and prompts for the Supervisor Password only when the Setup utility is called up.

APIC Mode

APIC stands for Advanced Programmable Interrupt Controller. The default setting is Enabled.

MPS Version Control for OS

This option specifies the MPS (Multiprocessor Specification) version for your operating system. MPS version 1.4 added extended configuration tables to improve support for multiple PCI bus configurations and improve future expandability. The default setting is 1.4.

OS Select for DRAM > 64MB

This option allows the system to access greater than 64MB of DRAM memory when used with OS/2 that depends on certain BIOS calls to access memory. The default setting is Non-OS/2.

Report No FDD For WIN 95

If you are using Windows 95/98 without a floppy disk drive, select Enabled to release IRQ6. This is required to pass Windows 95/98's SCT test. You should also disable the Onboard FDC Controller in the Integrated Peripherals screen when there's no floppy drive in the system. If you set this feature to Disabled, the BIOS will not report the missing floppy drive to Win95/98.

Small Logo (EPA) Show

The EPA logo appears at the right side of the monitor screen when the system is boot up. The default setting is Enabled.

Advanced Chipset Features

This Setup menu controls the configuration of the chipset.

Phoenix - AwardBIOS CMOS Setup Utility Advanced Chipset Features

		ITEM HELP
DRAM Timing Selectable	By SPD	Menu Level >
CAS Latency Time	4	
DRAM RAS# to CAS# Delay	4	
DRAM RAS# Precharge	4	
Precharge delay (tRAS)	12	
System Memory Frequency	533MHZ	
SLP_S4# Assertion Width	1 to 2 Sec	
System BIOS Cacheable	Enabled	
Video BIOS Cacheable	Disabled	
Memory Hole at 15M-16M	Disabled	
PCI Express Root Port Func	Press Enter	
** On-Chip VGA Setting **		
PEG/On Chip VGA Control	Auto	
On-Chip Frame Buffer Size	8MB	
DVMT Mode	DVMT	
DVMT/FIXED memory Size	128MB	
SDVO Device Setting		
SDVO LVDS Protocol	1CH SPWG, 24bit	
SDVO Panel Number	1024x768	
Boot Display	Auto	
Panel Scaling	Auto	
Panel Number	1024x768 18 bit SC	
Onboard PCI-E LAN	Enable	
LAN PXE Option ROM	All Disable	

DRAM Timing Selectable

This option refers to the method by which the DRAM timing is selected. The default is *By SPD*.

CAS Latency Time

You can configure CAS latency time in HCLKs as 2 or 2.5 or 3. The system board designer should set the values in this field, depending on the DRAM installed. Do not change the values in this field unless you change specifications of the installed DRAM or the installed CPU.

DRAM RAS# to CAS# Delay

This option allows you to insert a delay between the RAS (Row Address Strobe) and CAS (Column Address Strobe) signals. This delay occurs when the SDRAM is written to, read from or refreshed. Reducing the delay improves the performance of the SDRAM.

DRAM RAS# Precharge

This option sets the number of cycles required for the RAS to accumulate its charge before the SDRAM refreshes. The default setting for the Active to Precharge Delay is *4*.

Precharge Delay (tRAS)

The default setting for the Precharge Delay is *12*.

System Memory Frequency

The default setting is *533MHz*.

SLP_S4# Assertion Width

The default setting is *1 to 2 Sec*.

System BIOS Cacheable

The setting of *Enabled* allows caching of the system BIOS ROM at F000h-FFFFh, resulting in better system performance. However, if any program writes to this memory area, a system error may result.

Video BIOS Cacheable

The Setting *Enabled* allows caching of the video BIOS ROM at C0000h-F7FFFh, resulting in better video performance. However, if any program writes to this memory area, a system error may result.

Memory Hole At 15M-16M

In order to improve performance, certain space in memory can be reserved for ISA cards. This memory must be mapped into the memory space below 16 MB. The choices are *Enabled* and *Disabled*.

On-Chip VGA Setting

The fields under the On-Chip VGA Setting and their default settings are:

PEG/On Chip VGA Control: Auto

On-Chip Frame Buffer Size: 8MB

DVMT Mode: DVTM

DVMT/Fixed Memory Size: 128MB

SDVO Device Setting: (LVDS, DVI, Dual DVI, CRT)

Remarks: Set to LVDS for ID390, Set to CRT to ID390C, Set to DVI for ID391/ID392/ID391D/ID392D

SDVO LVDS Protocol: 1Ch SPWG, 24bit

SDVO Panel Number: 1024x768

Boot Display: Auto

Panel Scaling: Auto

Panel Number: 1024x768 18 bit SC

Panel Scaling

The default setting is *Auto*. The options available include *On* and *Off*.

Panel Number

These fields allow you to select the LCD Panel type. The default values for these ports are:

640x480	18bit SC
800x480	18bit SC
800x600	18bit SC
1024x768	18bit SC
1280x1024	18bit DC
1280x768	18bit SC
1400x1050	18bit DC
1600x1200	18bit DC

Onboard PCI-E LAN

By default, this setting is enabled.

LAN PXE Option ROM

By default, this setting is disabled. Other selections include ICH6 Integrated LAN and Marvell PCI-E LAN.

Integrated Peripherals

This section sets configurations for your hard disk and other integrated peripherals. The first screen shows three main items for user to select. Once an item selected, a submenu appears. Details follow.

Phoenix - AwardBIOS CMOS Setup Utility Integrated Peripherals

OnChip IDE Device	Press Enter	ITEM HELP
Onboard Device	Press Enter	Menu Level >
SuperIO Device	Press Enter	

Phoenix - AwardBIOS CMOS Setup Utility OnChip IDE Device

IDE HDD Block Mode	Enabled	ITEM HELP
On-chip Primary PCI IDE	Enabled	Menu Level >
IDE Primary Master PIO	Auto	
IDE Primary Slave PIO	Auto	
IDE Primary Master UDMA	Auto	
IDE Primary Slave UDMA	Auto	
On-Chip Secondary PCI IDE	Enabled	
IDE Secondary Master PIO	Auto	
IDE Secondary Slave PIO	Auto	
IDE Secondary Master UDMA	Auto

Phoenix - AwardBIOS CMOS Setup Utility Onboard Device

USB Controller	Enabled	ITEM HELP
USB 2.0 Controller	Enabled	Menu Level >
USB Keyboard Support	Disabled	
AC97 Audio Select	Auto	

		ITEM HELP
POWER ON Function	BUTTON ONLY	Menu Level >
KB Power ON Password	Enter	
Hot Key power ON	Ctrl-F1	
Onboard FDC Controller	Enabled	
Onboard Serial Port 1	3F8/IRQ4	
Onboard Serial Port 2	2F8/IRQ3	
UART Mode Select	Normal	
RxD , TxD Active	Hi, Lo	
IR Transmission Delay	Disabled	
UR2 Duplex Mode	Half	
Use IR Pins	IR-Rx2Tx2	
PWRON After PWR-Fail	Off	

IDE HDD Block Mode

This field allows your hard disk controller to use the fast block mode to transfer data to and from your hard disk drive.

On-chip Primary PCI IDE Enabled

This field, by default, is enabled

OnChip Primary/Secondary PCI IDE

The integrated peripheral controller contains an IDE interface with support for two IDE channels. Select *Enabled* to activate each channel separately.

IDE Primary/Secondary Master/Slave PIO

These fields allow your system hard disk controller to work faster. Rather than have the BIOS issue a series of commands that transfer to or from the disk drive, PIO (Programmed Input/Output) allows the BIOS to communicate with the controller and CPU directly.

The system supports five modes, numbered from 0 (default) to 4, which primarily differ in timing. When Auto is selected, the BIOS will select the best available mode.

IDE Primary/Secondary Master/Slave UDMA

These fields allow your system to improve disk I/O throughput to 33Mb/sec with the Ultra DMA/33 feature. The options are *Auto* and *Disabled*.

On-Chip Serial ATA Setting

The fields under the SATA setting includes On-Chip Serial ATA (Auto), PATA IDE Mode (Secondary) and SATA Port (PO, P2 is Primary).

USB Controller

The options for this field are *Enabled* and *Disabled*. By default, this field is set to *Enabled*.

USB 2.0 Controller

The options for this field are *Enabled* and *Disabled*. By default, this field is set to *Enabled*. In order to use USB 2.0, necessary OS drivers must be installed first. *Please update your system to Windows 2000 SP4 or Windows XP SP2.*

USB Keyboard Support

The options for this field are *Enabled* and *Disabled*. By default, this field is set to *Disabled*.

AC97 Audio Select

This field, by default, is set to *Auto*.

Power ON Function

This field is related to how the system is powered on – such as with the use of conventional power button, keyboard or hot keys. The default is ***BUTTON ONLY***.

KB Power ON Password

This field allows users to set the password when keyboard power on is the mode of the Power ON function.

Hot Key Power ON

This field sets certain keys, also known as hot keys, on the keyboard that can be used as a ‘switch’ to power on the system.

Onboard FDC Controller

Select *Enabled* if your system has a floppy disk controller (FDC) installed on the motherboard and you wish to use it. If you install an add-in FDC or the system has no floppy drive, select *Disabled* in this field. This option allows you to select the onboard FDD port.

Onboard Serial Port

These fields allow you to select the onboard serial ports and their addresses. The default values for these ports are:

Serial Port 1	3F8/IRQ4
Serial Port 2	2F8/IRQ3

UART Mode Select

This field determines the UART 2 mode in your computer. The default value is *Normal*. Other options include *IrDA* and *ASKIR*.

PWRON After PWR-Fail

This field sets the system power status whether *on or off* when power returns to the system from a power failure situation.

Power Management Setup

Phoenix - AwardBIOS CMOS Setup Utility
Power Management Setup

Power Management Setup		ITEM HELP
ACPI Function	Enabled	Menu Level >
ACPI Suspend	S1(POS)	
RUN VGABIOS if S3 Resume	Auto	
Power Management	User Define	
Video Off Method	DPMS	
Video Off In Suspend	Yes	
Suspend Type	Stop Grant	
Modem Use IRQ	3	
Suspend Mode	Disabled	
HDD Power Down	Disabled	
Soft-Off by PWR-BTTN	Instant-Off	
Wake-Up by PCI Card	Disabled	
Power On by Ring	Disabled	
Resume by Alarm	Disabled	
Date (of Month) Alarm	0	
Time (hh:mm:ss) Alarm	0 : 0 : 0	
** Reload Global Timer Events **		
Primary IDE 0	Disabled	
Primary IDE 1	Disabled	
Secondary IDE 0	Disabled	
Secondary IDE 1	Disabled	
FDD, COM, LPT Port	Disabled	
PCI PIRQ[A-D] #	Disabled	

ACPI Function

Enable this function to support ACPI (Advance Configuration and Power Interface).

ACPI Suspend

The default setting of the ACPI Suspend mode is *S1(POS)*.

RUN VGABIOS if S3 Resume

The default setting of this field is *Auto*.

Power Management

This field allows you to select the type of power saving management modes. There are four selections for Power Management.

Min. Power Saving	Minimum power management
Max. Power Saving	Maximum power management.
User Define	Each of the ranges is from 1 min. to 1hr. Except for HDD Power Down which ranges from 1 min. to 15 min.

Video Off Method

This field defines the Video Off features. There are three options.

V/H SYNC + Blank	Default setting, blank the screen and turn off vertical and horizontal scanning.
DPMS	Allows BIOS to control the video display.
Blank Screen	Writes blanks to the video buffer.

Video Off In Suspend

When enabled, the video is off in suspend mode. The default setting is *Yes*.

Suspend Type

The default setting for the Suspend Type field is *Stop Grant*.

Modem Use IRQ

This field sets the IRQ used by the Modem. By default, the setting is 3.

Suspend Mode

When enabled, and after the set time of system inactivity, all devices except the CPU will be shut off.

HDD Power Down

When enabled, and after the set time of system inactivity, the hard disk drive will be powered down while all other devices remain active.

Soft-Off by PWRBTN

This field defines the power-off mode when using an ATX power supply. The *Instant Off* mode allows powering off immediately upon pressing the power button. In the *Delay 4 Sec* mode, the system powers off when the power button is pressed for more than four seconds or enters the suspend mode when pressed for less than 4 seconds.

Wake up by PCI Card

By default, this field is disabled.

Power On by Ring

This field enables or disables the power on of the system through the modem connected to the serial port or LAN.

Resume by Alarm

This field enables or disables the resumption of the system operation. When enabled, the user is allowed to set the *Date* and *Time*.

Reload Global Timer Events

The HDD, FDD, COM, LPT Ports, and PCI PIRQ are I/O events that can prevent the system from entering a power saving mode or can awaken the system from such a mode. When an I/O device wants to gain the attention of the operating system, it signals this by causing an IRQ to occur. When the operating system is ready to respond to the request, it interrupts itself and performs the service.

PNP/PCI Configurations

This option configures the PCI bus system. All PCI bus systems on the system use INT#, thus all installed PCI cards must be set to this value.

Phoenix - AwardBIOS CMOS Setup Utility
PnP/PCI Configurations

BIOS Configuration		ITEM HELP
Init Display First	PCI Slot	Menu Level Select Yes if you are using a Plug and Play capable operating system. Select No if you need the BIOS to configure non-boot devices

INT Pin 4 Assignment	Auto	
INT Pin 5 Assignment	Auto	
INT Pin 6 Assignment	Auto	
INT Pin 7 Assignment	Auto	
INT Pin 8 Assignment	Auto	
PCI Express relative items		
Maximum Payload Size	4096	

Init Display First

The default setting is *PCI Card*.

Reset Configuration Data

This field allows you to determine whether to reset the configuration data or not. The default value is *Disabled*.

Resources Controlled by

This PnP BIOS can configure all of the boot and compatible devices with the use of a PnP operating system such as Windows 95.

PCI/VGA Palette Snoop

Some non-standard VGA display cards may not show colors properly. This field allows you to set whether or not MPEG ISA/VESA VGA cards can work with PCI/VGA. When this field is enabled, a PCI/VGA can work with an MPEG ISA/VESA VGA card. When this field is disabled, a PCI/VGA cannot work with an MPEG ISA/VESA card.

Maximum Payload Size

The default setting of the PCI Express Maximum Payload Size is 4096.

PC Health Status

This section shows the parameters in determining the PC Health Status. These parameters include temperatures, fan speeds and voltages.

Phoenix - AwardBIOS CMOS Setup Utility
PC Health Status

		ITEM HELP
Shutdown Temperature	Disabled	Menu Level >
CPU Warning Temperature	Disabled	
Current System Temp	45°C/113°F	
Current CPU Temp	45°C/113°F	
System FAN Speed	5400 RPM	
CPU FAN Speed	5400 RPM	
Vcore(V)	1.02 V	
12 V	1.32 V	
1.8V	1.8V	
-5V	-5.02V	
+5V	5.25 V	
-12V	-12.59	
3.3V	3.37V	
VBAT (V)	3.21 V	
5VSB(V)	5.67 V	
Smart Fan2 Temperature	Disabled	
Smart Fan2 Tolerance Value	5	

CPU Warning Temperature

This field allows the user to set the temperature so that when the temperature is reached, the system sounds a warning. This function can help prevent damage to the system that is caused by overheating.

Temperatures/Voltages

These fields are the parameters of the hardware monitoring function feature of the motherboard. The values are read-only values as monitored by the system and show the PC health status.

Shutdown Temperature

This field allows the user to set the temperature by which the system automatically shuts down once the threshold temperature is reached. This function can help prevent damage to the system that is caused by overheating.

Smart Fan2 Temperature

This field enables or disables the smart fan feature. At a certain temperature, the fan starts turning. Once the temperature drops to a certain level, it stops turning again.

Smart Fan Tolerance Value

The default value is 5.

Frequency/Voltage Control

This section shows the user how to configure the processor frequency.

Phoenix - AwardBIOS CMOS Setup Utility
Frequency/Voltage Control

Auto Detect PCI Clk	Disabled	ITEM HELP
Spread Spectrum Modulated	Disabled	Menu Level >

Auto Detect PCI Clk

This field enables or disables the auto detection of the PCI clock.

Spread Spectrum Modulated

This field sets the value of the spread spectrum. The default setting is *Disabled*. This field is for CE testing use only.

Load Fail-Safe Defaults

This option allows you to load the troubleshooting default values permanently stored in the BIOS ROM. These default settings are non-optimal and disable all high-performance features.

Load Optimized Defaults

This option allows you to load the default values to your system configuration. These default settings are optimal and enable all high performance features.

Set Supervisor Password

These two options set the system password. Supervisor Password sets a password that will be used to protect the system and Setup utility. User Password sets a password that will be used exclusively on the system. To specify a password, highlight the type you want and press <Enter>. The Enter Password: message prompts on the screen. Type the password, up to eight characters in length, and press <Enter>. The system confirms your password by asking you to type it again. After setting a password, the screen automatically returns to the main screen.

To disable a password, just press the <Enter> key when you are prompted to enter the password. A message will confirm the password to be disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

Save & Exit Setup

This option allows you to determine whether or not to accept the modifications. If you type “Y”, you will quit the setup utility and save all changes into the CMOS memory. If you type “N”, you will return to Setup utility.

Exit Without Saving

Select this option to exit the Setup utility without saving the changes you have made in this session. Typing “Y” will quit the Setup utility without saving the modifications. Typing “N” will return you to Setup utility.

Chapter 4 Installation of Drivers

This chapter describes the installation procedures for software and drivers under the Windows 98SE, Windows ME, Windows 2000 and Windows XP. The software and drivers are included with the motherboard. The contents include **Intel Chipset Software Installation Utility, VGA Drivers Installation, AC97 Codec Audio Driver Installation, and Intel PRO LAN Drivers Installation.**

Important Note:

After installing your Windows operating system (Windows 98SE/ME/2000/XP), you must install first the Intel Chipset Software Installation Utility before proceeding with the installation of drivers.

4.1 Intel Chipset Software Installation Utility

The Intel Chipset Drivers should be installed first before the software drivers to enable Plug & Play INF support for Intel chipset components.

Follow the instructions below to complete the installation under Windows 2000/XP.

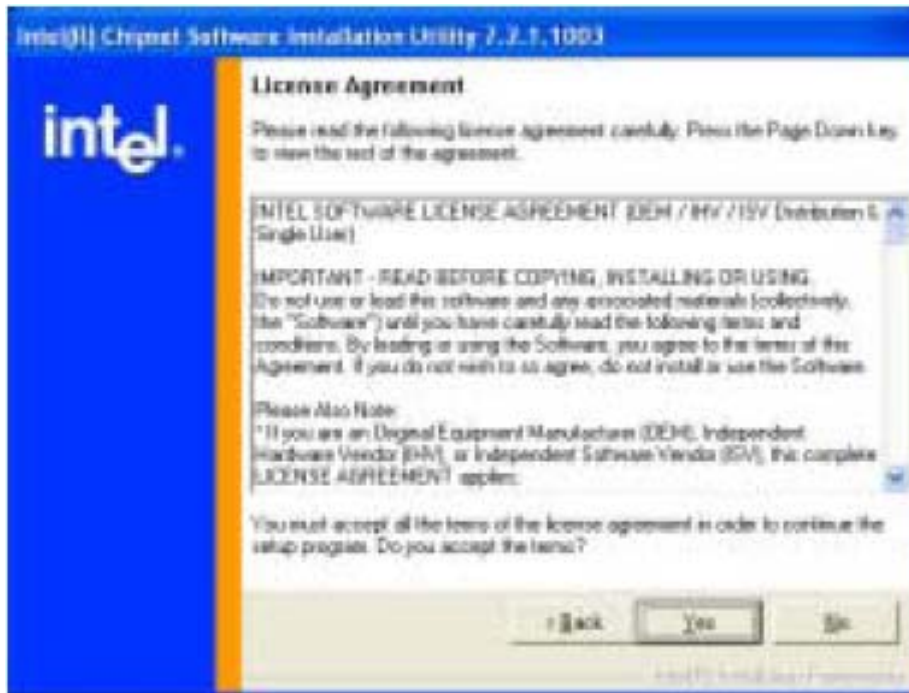

1. Insert the CD that comes with the board. Click **Intel Chipsets** and then **Intel(R) I945GMChipset Drivers**.
2. Click **Intel(R) Chipset Software Installation Utility**.

3. When the Welcome screen appears, click Next to continue.

4. Click Yes to accept the software license agreement and proceed with the installation process.

5. On Readme Information screen, click Next to continue the installation.

6. The Setup process is now complete. Click Finish to restart the computer and for changes to take effect. When the computer has restarted, the system will be able to find some devices. Restart your computer when prompted.

4.2 VGA Driver Installation

To install the VGA drivers, follow the steps below to proceed with the installation.

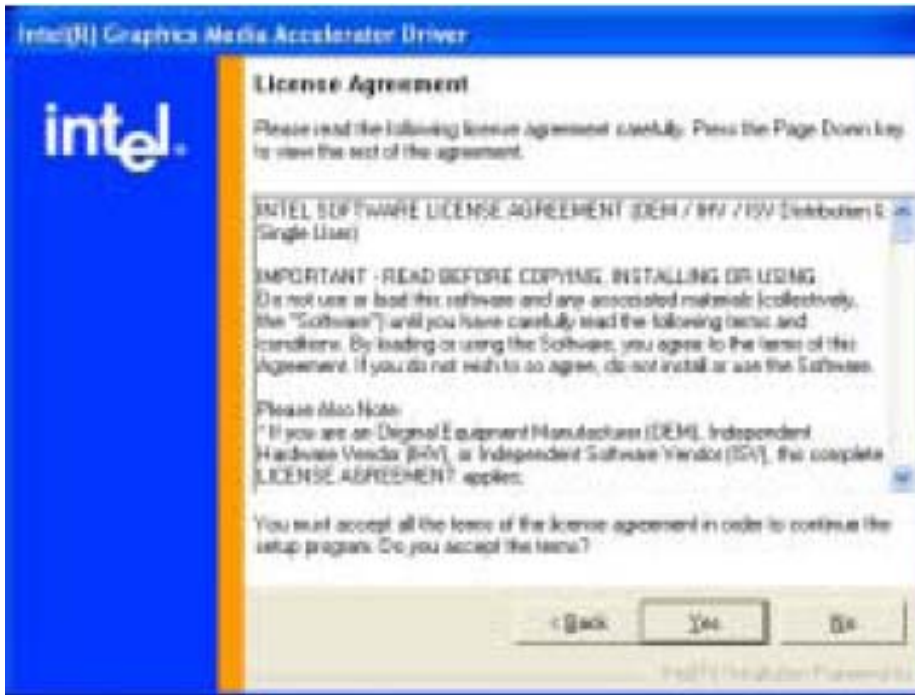

1. Insert the CD that comes with the motherboard. Click **Intel Chipsets** and then **Intel(R) I945GM Chipset Drivers**.
2. Click **Intel(R) I945GM Chipset Family Graphics Driver**.

3. When the Welcome screen appears, click Next to continue.

4. Click Yes to to agree with the license agreement and continue the installation.

5. Restart the computer as prompted and for changes to take effect.

IMPORTANT NOTE:

When you have restarted the computer, your computer screen will be blank. At this point, press CTRL-ALT-F1 simultaneously, if you are using CRT monitor. If you are using LVDS LCD panel, press CTRL-ALT-F3. If you are using DVI monitor, press CTRL-ALT-F4.

4.3 AC97 Codec Audio driver Installation

Follow the steps below to install the Realtek AC97 Codec Audio Drivers.

1. Insert the CD that comes with the motherboard. Click **Intel Chipsets** and then **Intel(R) I945GM Chipset Drivers**.
2. Click **Realtek AC'97 Codec Audio Driver**.

3. Click **Finish** to restart the computer and for changes to take effect.

4.4 LAN Driver Installation

Follow the steps below to complete the installation of the Intel PRO LAN drivers.

1. Insert the CD that comes with the motherboard. Click **Intel Chipsets** and then **Intel(R) I945GMChipset Drivers**, then **Intel(R) PRO LAN Network Drivers**.

2. Click **Install Base Software** to continue.

3. When prompted, please to restart the computer for new settings to take effect.

Follow the steps below to install the **Marvell Gigabit LAN** drivers.

1. Insert the CD that comes with the motherboard. Click **LAN Card** and then **Marvell LAN Controller Driver**.

2. Click Next when the InstallShield Wizard welcome screen appears.

3. Click Next to agree with the license agreement.

4. Click Next when the Readme Information screen appears to proceed with the drives installation process.

5. When the Installation is complete, click Finish for the changes to take effect.

Chapter 5 Touch Screen Installation

This chapter describes how to install drivers and other software that will allow your PenMount 5000 Controller Board (USB) to work with different operating systems.

NOTE: PenMount USB drivers support up to 15 USB controllers.

5.1 Introduction to Touch Screen Controller Board

The control board is configured for use with the USB interface. It connects to the touch screen, power supply and computer system's USB port, and supports 4-, 5- and 8-wire touch screens. The control board has some advanced functions, such as PnP and non-PnP mode adjustable baud rate, thus making easy for customers to select different touch screens without changing the control board. The size of the board is 25 by 60mm, and it has two connectors and one dipswitch on-board.

Figure 5.1: Bird's Eye View of Control Board

5.2 Windows Me/2000/XP USB Driver Installation for 5000 Boards

Before installing the Windows Me/2000/XP USB driver software, you must have the Windows Me/2000/XP system installed and running on your computer. You must also have one of the following PenMount USB controller boards installed: 5184 or 51A5. Contents of the PenMount Windows Me/2000/XP USB driver folder are listed below.

Setup.exe

PenMount 98.inf

PenMount.inf

Pm_lower.sys

Pm_upper.sys

If you have an older version of the PenMount Windows Me/2000/XP USB driver installed in your

system, please remove it first. Follow the steps below to install the PenMount Windows Me/2000/XP USB driver.

- 5.2.1** Insert the Apex product cd install **setup.exe**. the screen below would appear.
Click touch panel driver

IMPORTANT! Before installing the driver software you *must* plug the board into a USB port.

- 5.2.2** The screen displays 'InstallShield Wizard' to install the PenMount Windows Me/2000/XP driver. Click 'Next' to begin installing the PenMount USB driver to system.

- 5.2.3** The license agreement appears. Click 'Next'.

5.2.4 The next screen shows 'Ready to Install the Program'. Click 'Install'.

5.2.5 The 'InstallShield Wizard completed' screen appears. Click 'Finish'.

- 5.2.6** A message box appears stating the driver does not have an MS Logo. Select 'Continue Anyway' to finish the installation. The PenMount USB driver is now completely installed.

Configuring the PenMount Windows Me/2000/XP USB Driver

Upon rebooting, the computer automatically finds the new 5000 USB controller board. The touch screen is connected but not calibrated. Follow the procedures below to carry out calibration.

5.2.6.1 After installation, click the PenMount Monitor icon "PM" in the menu bar.

5.2.6.2 When the PenMount Control Panel appears, click "Calibrate."

PenMount Control Panel

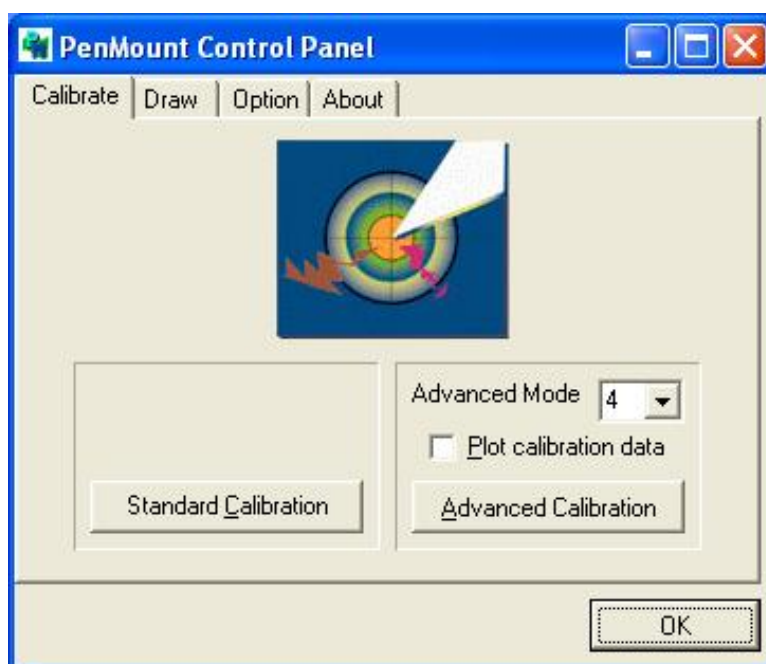

The functions of the PenMount Control Panel are **Calibrate**, **Draw**, and **About**, which are explained in the following sections.

Calibrate

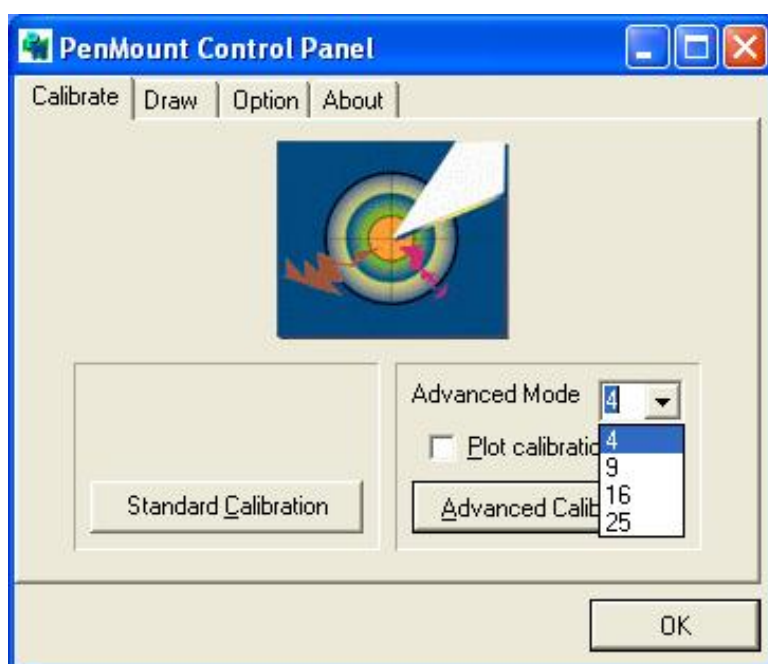

This function offers two ways to calibrate your touch screen. 'Standard Calibration' adjusts most touch screens. 'Advanced Calibration' adjusts aging touch screens.

Standard Calibration Click this button and arrows appear pointing to red squares. Use your finger or stylus to touch the red squares in sequence. After the fifth red point calibration is complete. To skip, press 'ESC'.

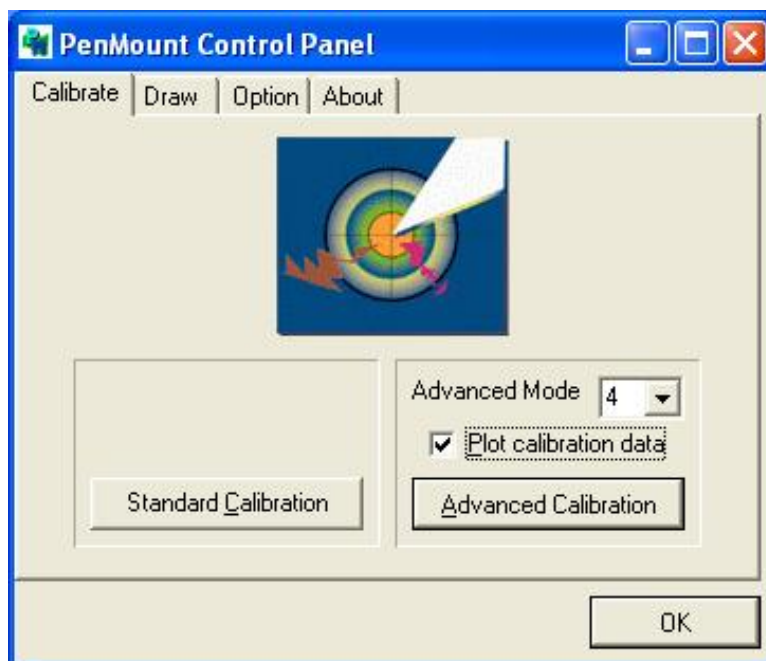

Advanced Calibration Advanced Calibration uses 4, 9, 16 or 25 points to effectively calibrate touch panel linearity of aged touch screens. Click this button and touch the red squares in sequence with a stylus. To skip, press ESC'.

NOTE: The older the touch screen, the more Advanced Mode calibration points you need for an accurate calibration. Use a stylus during Advanced Calibration for greater accuracy.

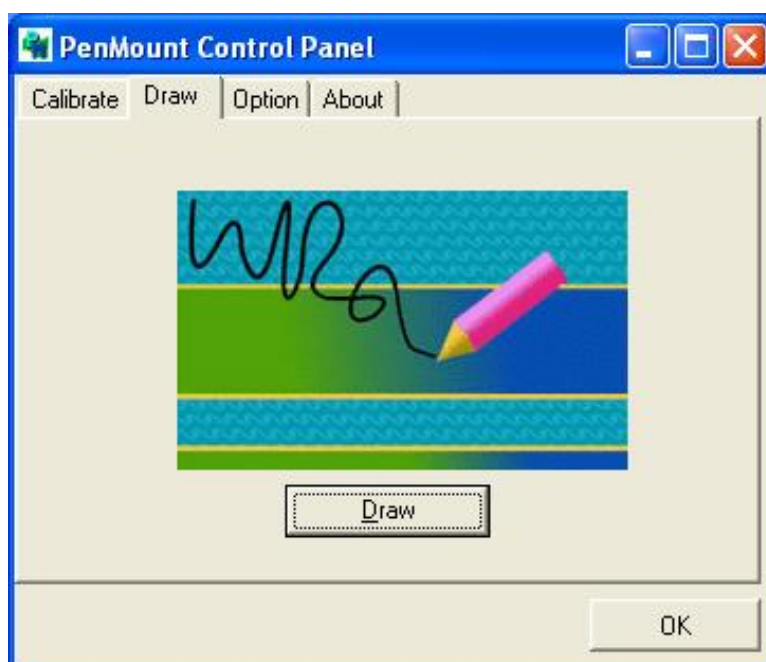

Plot Calibration Data **Check this function and a touch panel linearity comparison graph appears when you have finished Advanced Calibration. The blue lines show linearity before calibration and black lines show linearity after calibration.**

Draw

Tests or demonstrates the PenMount touch screen operation. The display shows touch location. Click **Draw** to start.

Touch the screen with your finger or a stylus and the drawing screen registers touch activity such **left**, **right**, **up**, **down**, **pen up**, and **pen down**.

Click Clear Screen to clear the drawing.

Options

This panel function supports two modes—Operation Mode and Beep Sound Mode—which allow configuration for specific touch screen applications, such as point-of-sales (POS) terminals.

- Operation Mode **This mode enables and disables the mouse's ability to drag on-screen icons—useful for configuring POS terminals.**
- Stream Mode*** – Select this mode and the mouse functions as normal and allows dragging of icons.
- Point Mode*** – Select this mode and the mouse only provides a click function, and dragging is disabled.
- Beep Sound Mode ***Enable Beep Sound*** – turns beep function on and off
- Beep on Pen Down*** – beep occurs when pen comes down
- Beep on Pen Up*** – beep occurs when pen is lifted up
- Beep on both of Pen Down/Up*** – beep occurs on both
- Beep Frequency*** – modifies sound frequency
- Beep Duration*** – modifies sound duration

About

This panel displays information about the PenMount controller and driver version.

PenMount Monitor Menu Icon

The PenMount monitor icon (PM) appears in the menu bar of Windows Me/2000/XP system after the Windows Me/2000/XP USB driver is installed.

PenMount Monitor has the following functions.

Beep	Turns touch screen beep on or off.
Right Button	When you select this function, a mouse icon appears in the right-bottom of the screen. Click this icon to switch between Right and Left Button functions.

Exit	Exits the PenMount Monitor function.
------	---

PenMount Rotating Functions

The PenMount driver for Windows Me/2000/XP supports several display rotating software packages. Please see Chapter 5 for more information. The PenMount drivers for Windows 95, Windows 98/Me, Windows 2000/XP, as well as Windows 98 USB and Windows Me/2000/XP support display rotating software packages such as:

- ◎Portrait's Pivot Screen Rotation Software
- ◎ATI Display Driver Rotate Function
- ◎nVidia Display Driver Rotate Function
- ◎SMI Display Driver Rotate Function
- ◎Intel 845G/GE Display Driver Rotate Function

Configuring the Rotate Function

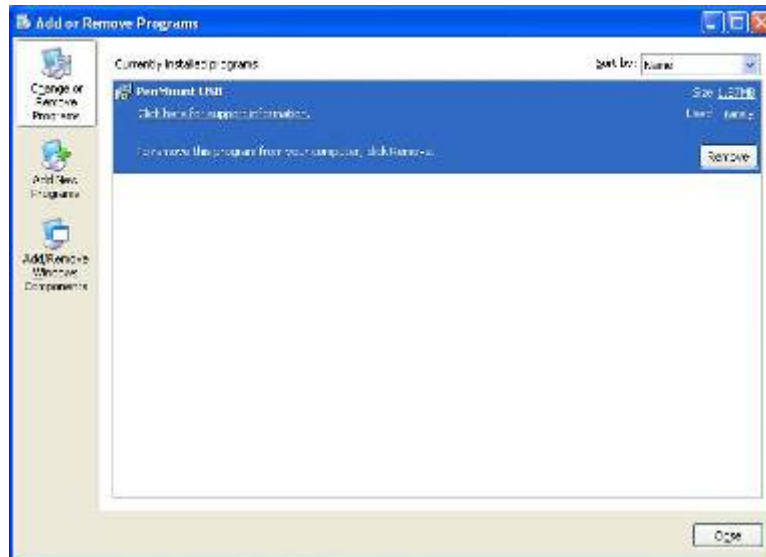

1. Install the rotation software package.
2. Choose the rotate function (0°, 90°, 180°, 270°) in the 3rd party software. The calibration screen appears automatically. Touch this point and rotation is mapped.

NOTE: The Rotate function is disabled if you use Monitor Mapping.

5.3 Uninstall the PenMount Windows Me/2000/XP USB driver

1. Exit the PenMount monitor (PM) in the menu bar.
2. Remove the PenMount USB driver from “Start/Control Panel/Add/Remove Programs. Select ‘PenMount USB’ and click ‘Remove’.

3. Click 'Yes' to confirm removal of the driver and the PenMount Windows 98 USB driver is completely removed from the system.
